

RC-SPK EMERGENCY CALL SWITCH WITH INTERCOM SPEAKER

The RC-SPK room console switch consists of a standard emergency call pull switch with red LED status indicator light and beaded brass chain. The beaded chain provides a more secure gripping surface than typical nylon strings. The speaker activates when any emergency call switch in the department is activated, or optionally the speaker can be software controlled and activate by any device such as a wireless pendant that is assigned to that department. The conversation is hands-free on the part of the employee. The intercom can be connected to any hand held radio for prompt response to the employee. The switch is reverse printed on clear acrylic media and then laminated to the back plate. The protected printing will never chip or peel off. Custom printing of switch plates is also available.

RC-SPK Specifications:

Dimensions: 4 5/8"H x 4 5/8"W

Back box: 4S with double gang plaster ring

Adjustable trim ring assures accurate vertical alignment even when back boxes are askew.
