

FASM6 SOLAR PANEL

The FASM6 solar panel may be used to power FA575 wireless repeaters and FA536 wireless locators in remote areas. The only modification necessary is to replace the standard 1.2 amp hour storage battery with a 4.0 amp hour battery. The solar panel is not suitable for use in very cold climates as an accessory heater is required for cold outdoor installations. In these instances one must find an AC plug for power.

FASM6 Specifications:

Dimensions: 6 7/8"H x 13"W x 1 3/8"D

Weight: 34.7 oz.

Power input: 15vdc at .4 amps
