

MOBILE LONE WORKER

CARECALLER

Emergency Call And Security Solutions For Mobile Lone Workers

CARECALLER

CARECALLER Emergency Call Systems are perfect for any company that is concerned with the safety and security of their employees. Our Mobile Lone Worker System is designed for industries that require their workers to travel and work alone. Our system will work even in the most remote areas.

Some of the industries the Mobile Lone Worker System is designed for include:

- Trucking
- Mining
- Oil Rigs
- Rail
- Forestry
- Tele Communications
- Hydro
- Correctional Facilities – Highway Clean-up

CARECALLER's Mobile Lone Worker System is combined with a Satellite phone to provide a means to call out to emergency contacts. When an alarm is activated, the system will use either an automatic voice dialer to call out to pre-defined numbers, or a digital communicator that will call out to an alarm monitoring facility. This ensures that if your lone worker becomes unconscious or has an emergency, an signal will be sent out immediately.

The integrated satellite system acts not only as the phone system, but it also acts as a GPS tracking system for your employees, or your assets. The system will send an alarm signal if any assets such as machinery or equipment are being removed from their pre-defined locations.

CARECALLER's Mobile Lone Worker System comes packaged in an industrial case. It can be mounted directly in the vehicle, or on the equipment that you wish to protect. The System can be wired directly to the vehicle battery, with a lithium battery backup. Alternatively, this system can be purchased with a bank of batteries that must be regularly recharged. This option allows the unit to be transported freely.

Man Down Pendant

The Man Down pendant created an alarm if it is tilted over 60 degrees for more than the pre-defined amount of time. When tilted, it will beep, warning the worker that it is about to activate an alarm. An LED light flashes with all transmissions, including supervision, so the user knows the unit is operating. The pendant can be supervised for both operational readiness and low battery conditions. It comes with a belt clip and a holding stand which keeps the pendant upright when it is not being worn by the worker. Included is a user-replaceable 3V lithium battery.

Locating Devices

A strobe light and/or siren can be mounted to the top of the vehicle to assist Emergency Personnell with locating the worker. These will be activated when an emergency call is placed, and will continue to run until reset.

Satellite Service

The satellite service is provided by Iridium and it is billed on a pay per use basis. This means that there are no monthly fees to worry about. In the event of an emergency call the charge will be \$4.00/minute, which is a small price to pay for the security of your employee.
